

Mil-Con was founded in 1983 to manufacture 5 and 6 pin audio connectors for ground based military communications programs. A full product line of cable mount and board level connectors were developed to satisfy standard as well as unique requirements. Mil-Con complies with Mil-C-55116 requirements and meets the specifications of the National Security Agency's listing of "ON" drawings for secure programs.

Mil-Con's innovative engineering has brought new technology to this existing connector segment and developed many special and custom connector products for higher pin-count, higher density, size-reduced and custom applications such as System, GPS, and Antenna connectors. Filtered capabilities have also been fully developed to establish Mil-Con as a growing leader in the audio connector market.
